The **TruTemp™ by Taylor Dual Surface Infrared Thermometer with Folding Probe** combines two essential temperature-reading tools into one high-performance device, delivering precision, convenience, and durability for both indoor and outdoor cooking. Designed with a non-contact infrared sensor, it quickly and accurately measures surface temperatures on grills, pizza stones, griddles, pans, and cookware, ensuring cooking surfaces are properly preheated before food is added. The integrated fold-out instant-read probe measures internal food temperatures for meats, poultry, seafood, and more, eliminating guesswork and helping prevent undercooking or overcooking. Built for rugged performance, the thermometer features a fully waterproof, high-heat-resistant housing engineered to withstand demanding grilling environments. The probe folds away for safe storage and portability, while a rare-earth magnet embedded in the back allows the unit to securely attach to grills, smokers, or other metal surfaces for convenient access during cooking. A bright blue backlit digital display ensures easy readability in both daylight and low-light conditions. Factory-calibrated sensors deliver exceptional accuracy and fast response times, meeting rigorous standards trusted by food service professionals. A screwdriver is included for easy battery replacement. Available in blue, gray, and green. $34.99, Amazon, TaylorUSA.com
