Cutting Edge Firewood Ignites the Future With Smokeless Thermoelectric Firepit

ATLANTA, May 16, 2024 -- [Cutting Edge Firewood](#), an Atlanta-based firewood company that features ultra-premium firewood and cooking wood, today debuts a new smokeless [thermoelectric firepit](#) to elevate outdoor gatherings. The new patented thermoelectric firepit technology creates a beautiful fire that radiates warmth further than traditional smokeless firepits.

The Cutting Edge Firewood firepit draws cool air in, converts it into hot air which then creates a flow of energy that powers fans to send warm air out into a 360-degree radius 6 to 8 feet from the firepit.

“As founder of a firewood company, I have spent thousands of nights around firepits of every type,” said Leroy Hite, Founder and CEO of Cutting Edge Firewood. “I wanted to design a deluxe firepit that is an exceptional heat source and that burns our wood with a beautiful, smokeless fire.”

Perfect for outdoor gatherings, the upscale Cutting Edge Firewood firepit features a triple-wall design of premium stainless steel and uses wood as its fuel source. It measures 22” tall, 22” external diameter, and 18” internal pit diameter. The firepit weighs 100 lbs. Additional features include legs and an insulated bottom so consumers can place the firepit safely on wood, stone, tile and concrete surfaces. The firepit also includes a heavy-duty, stainless-steel lid that can help extinguish the last bit of a waning fire, and an ash drawer for easy clean up after use.

“Most smokeless firepits burn well, but the heat doesn’t radiate much beyond the pit itself,” continued Hite. “We created this exclusive design and tested it for over a year so our new thermoelectric firepit creates heat well beyond the pit and your feet stay warm!”

The firepit retails for \$1,500 with pre-orders for fall delivery available now. The first 300 orders will receive a complimentary box of Cutting Edge Firewood.

About Cutting Edge

Cutting Edge Firewood was created to provide the best firewood and cooking wood available. The wide variety of firewood, cooking wood and pizza cut wood from Cutting Edge Firewood undergoes a special drying process to ensure it is free from unwanted pests, mold or fungus and provides an unmatched clean and bright burn with pleasant aroma. Cutting Edge Firewood uses only the best hardwoods for firewood and cooking, including oak, hickory, cherry, apple, pecan, and maple. More information about the firepit and wood varieties available at www.cuttingedgefirewood.com
