

NOT ALL THERMOMETERS ARE DESIGNED EQUAL

**Here's Why Core
Temperature Sites
Matter**

Swipe to learn more

Did you know that not all measuring sites provide the same reliability?

Rectal is considered the gold standard for core temperature measurement for over a century!

Oral is the next most reliable, followed by **Axillary (underarm)**—all backed by clinical studies

Forehead readings? Not so reliable! Factors like air movement, humidity, battery life, and even how far the thermometer is held from the skin can lead to inaccurate results.

At Medical Indicators, we focus on clinically proven sites to ensure reliable, accurate temperature readings—because when health is on the line, precision matters.

TraxIt®

- Accurate, hygienic & single-use
- Lightweight, easily portable
- Eco-friendly: no batteries & mercury-free
- FDA approved, trusted by healthcare providers worldwide
