

IT'S NOT DEAD YET

Meet mitogrow a revolutionary biostimulant rewriting the rules of plant care.

mitogrow isn't just another plant product. It's built on a patented blend of biology and chemistry designed to improve plant performance in a smarter, more natural way.

While fertilizers feed your plants and pesticides defend them, mitogrow helps plants thrive from the inside out — using a science-backed formula that supports healthier growth, greater resilience, and better results across the board.

TRUSTED BY PROS. GARDENERS CHOICE.

PLANT.

When planting, feeding or transplanting — Every. Single. Time.

PROTECT

Before temperature changes, seasons or travel. Or any time you want.

FEED.

During regular watering and feeding cycles.

REVIVE

After neglect, over-watering, or visible decline.

mitogrow™

OUR STORY

mitogrow began in the commercial green industry with one clear mission: solve the toughest challenges in plant health care. Growers needed more than basic fertilizers—they needed a reliable way to help plants handle stress, recover faster, and perform consistently. mitogrow answered with a patented biostimulant that became a powerful solution for multiple plant health issues, supporting stronger growth and resilience when conditions weren't ideal.

Backed by many years of research and development conducted by Texas A&M, UC Davis, and leading industry experts, mitogrow built its reputation on proven science and real-world results. As success grew in the commercial market, the question became simple: why shouldn't home gardeners have access to the same technology?

That's why mitogrow launched the retail version, **"It's Not Dead Yet,"** bringing commercial-grade science to backyards everywhere. Now home gardeners can give their plants the same advanced support—helping them **PLANT. FEED. PROTECT. REVIVE** with confidence.
